

System User Manual

Supplier and Order Management System

1. System Access & Credentials

The system is protected by strict Role-Based Access Control (RBAC). You must enter a valid Username to access your designated dashboard. **No password is required** in the current configuration—authentication is exclusively ID-based.

Default System Users:

Username (ID)	Role / Access Level
SUP123	Supplier Manager
ORD123	Order Manager

Note: If you have modified the system or run the Data Seeder, your specific IDs might differ. Use the credentials configured in your initial setup.

2. Getting Started (Login)

1. Launch the application using your IDE or by running the compiled `.jar` file.
2. You will be greeted by the **Login Screen**.
3. **IMPORTANT:** If you are starting fresh, click the green **Load Example Data** button first. This will securely populate the system's memory with test suppliers, products, and historical orders.
(Note: Do this only once upon initial boot).
4. Enter your designated Username (e.g., `SUP123`) into the text field.
5. Click **Login**. The system will verify your role and route you to the correct dashboard.

3. Example Data (For Functional Testing)

To demonstrate the system's full capabilities without manual data entry, the **Data Seeder** initializes a complete ecosystem of suppliers, varying delivery terms, and multi-tier discount brackets for testing purposes.

Supplier	ID (BN)	Delivery Terms	Key Products & Discounts
Tnuva Dairy	511111111	Sun, Wed (Supplier Transports)	Milk 3%: 5% off (100+), 15% off (500+) Cottage Cheese: 8% off (50+) Yellow Cheese (No discount)
Osem	522222222	Mon, Thu (Self-pickup)	Bamba: 10% off (100+), 20% off (1000+) Ketchup: 5% off (50+) Pasta: 15% off (100+)
Elite	533333333	Tue (Supplier Transports)	Cow Chocolate: 10% off (50+) Turkish Coffee: 12% off (100+)

Historical Orders: The system also initializes a pre-calculated historical order from Tnuva for 150 units of Milk 3%, demonstrating the automatic application of the 5% bulk discount.

4. Supplier Manager Workflow

Your centralized hub for managing supplier relationships, negotiating terms, and updating product catalogs.

- **Add a New Supplier:** Click the green + *Add New Supplier* button.
- **Overview & Settings Tab:** Update general entity information (Address, IBAN, Manufacturers).
- **Contact Personnel Tab:** Add new representatives or edit existing details.
- **Agreements & Products Tab:**
 - First, **Add an Agreement** to define delivery days and transport methods.
 - Select the agreement to **Add Products** to the catalog.
 - Select a product to **Add Discounts** (e.g., 10% off for quantities of 100 or more).

5. Order Manager Workflow

Designed to help you quickly generate on-demand orders while automatically securing the best possible price.

- **Start an Order:** Click *Start Order* to load the catalog from all active suppliers.
- **Calculate Cheapest Option:** Input the quantity required and click *Find Cheapest Supplier*. The algorithm scans all agreements, applies bulk discounts, and selects the most cost-effective supplier.
- **Finalize Order:** Modify quantities if needed, then click *Make Order Final*. The system deducts stock and notifies you of the required delivery methods.

6. Automatic Orders Setup (HQ Server)

Configure a daily trigger using Windows Task Scheduler on the HQ computer to execute scheduled orders without manual intervention.

1. Press the Windows key, type **Task Scheduler**, and hit Enter.
2. On the right-hand panel, click **Create Basic Task...** (Name: *Super-Lee Auto Orders*).
3. **Trigger:** Select *Daily* and set the time (e.g., 08:00 AM).
4. **Action:** Select *Start a program*. Type `java`
5. **Add arguments:** Type `-jar adss2025_v01.jar --auto`
6. **Start in (CRITICAL STEP):** Paste the absolute file path to the release folder where your JAR lives (e.g., `C:\Users\hensh\IdeaProjects\ADSS_Group_H\release\`).
7. Click **Finish**. The headless order execution will now run daily in the background.
