

ID	Module	Functional / non-functional	Description	Priority	Risk	Status
1.	Suppliers	Functional	The system MUST record the specific delivery terms for each supplier, including whether they deliver on fixed days, require on-demand orders, or require Super-Lee to pick up the delivery.	MH	High	To do
2.	Suppliers	Functional	The system MUST support the creation of a supplier card that stores the supplier's details, including company number, bank account, payment terms, and contact personnel.	MH	Low	To do
3.	Suppliers	Functional	The system MUST manage business agreements for each supplier, specifying the included items, the agreed price per item, and fixed supply days if applicable.	MH	High	To do
4.	Suppliers	Functional	The system CAN support a "Bill of Quantities" (כתב כמויות) within supplier agreements to define volume-based discounts, and calculate these discounts dynamically based on the amount ordered.	NTH	High	To do
5.	Suppliers	Functional	The system MUST record the specific catalog number used by the supplier for each item to facilitate order generation and system integration.	MH	Low	To do

#	Topic	Issue	Answer
1.	System Integration	How exactly are we supposed to "interface with their systems"?	צריך לשמור לכל ספק את הפרטים שלו. צריך לתת אפשרות במערכת להוספה עידכון ומחיקה
2.	Supplier Selection	If multiple suppliers provide the same item from the same manufacturer, how does the system choose whom to order from?	When multiple suppliers offer the exact same item, the system must automatically select the supplier offering the lowest price.
3.	Discount Calculation	What is the exact mathematical structure of the "Bill of Quantities" (כתב כמויות)?	לכל ספק זה שונה. צריך לתת אפשרות במערכת להוסיף את זה ע"י האחראי
4.	Payment Terms	What are the valid options for "payment terms"?	All payments to suppliers managed or recorded by the system will be processed exclusively via bank transfer.
5.	Order picking	How should the system manage the execution of order picking? Specifically, does the system automatically allocates picking tasks to specific workers, or does it simply generate a location manifest and timeline for a manager to assign manually?	Not relevant to this phase of the project.
6.	Agreements with each supplier	Is there a single agreement per supplier that can be updated over time, or are there multiple agreements, each corresponding to different orders, dates, or conditions?	אפשר לבחור את אחת מהאפשרויות שציינת למימוש שניהם נכונות
7.	Agreements without fixed days	In agreements with fixed days, we store a quantity for each product. However, for	These agreements will also store a

		agreements that are fulfilled only upon manual orders, should we store any quantity at all? Since demand may vary, it's difficult to predict how much the supermarket will require on a given day.	quantity for each product, but in this case, it represents the maximum amount the supplier can provide upon request.
