

ID	Module	Functional/Non-Functional	Description	Priority	Risk	Status
1	Inventory	Functional	System shall allow adding and updating products with barcodes.	High	Low	Completed
2	Inventory	Functional	System shall allow deleting products from the catalog.	High	Low	Completed
3	Inventory	Functional	System shall support hierarchical product categories.	Medium	Low	Completed
4	Inventory	Functional	System shall track separate quantities for shelves and warehouses.	High	Medium	Completed
5	Inventory	Functional	System shall allow transferring stock from warehouse to shelf.	High	Low	Completed
6	Inventory	Functional	System shall define and monitor a minimum required quantity per product.	High	Medium	Completed
7	Inventory	Functional	System shall allow reporting defective items, reducing available stock.	High	Low	Completed
8	Inventory	Functional	System shall support date-bounded discount promotions.	Medium	Medium	Completed
9	Inventory	Functional	System shall generate reports of items below minimum stock.	High	Low	Completed
10	Inventory	Functional	System shall generate reports of all items within a specific category.	Low	Low	Completed
11	Inventory	Non-Functional	System shall restrict access to users with the INVENTORY_MANAGER role.	High	High	Completed
12	Inventory	Functional	System shall automatically trigger a shortage alert to the Orchestrator when stock drops.	High	High	New (A2)
13	Inventory	Non-Functional	Dashboard UI must automatically react and refresh upon any stock change.	Medium	Low	New (A2)
14	Inventory	Non-Functional	All inventory data must be persisted to an SQLite Database.	High	High	New (A2)

ID	Module	Functional/Non-Functional	Description	Priority	Risk	Status
1	Transport	Functional	System shall maintain a fleet of trucks tracking net and max weights.	High	Low	Completed
2	Transport	Functional	System shall track drivers, license types, and expiry dates.	High	Low	Completed
3	Transport	Functional	System shall store origin and destination sites with contact details.	High	Low	Completed
4	Transport	Functional	System shall allow creating deliveries with ordered destinations.	High	Medium	Completed
5	Transport	Functional	System shall allow assigning specific cargo weights to destinations.	High	Medium	Completed
6	Transport	Functional	System shall prevent a delivery if total cargo exceeds truck capacity.	High	High	Completed
7	Transport	Functional	System shall prevent a STANDARD driver from driving a HEAVY truck.	High	High	Completed
8	Transport	Functional	System shall require a manager ID to authorize a pending delivery.	Medium	Low	Completed
9	Transport	Functional	System shall allow replanning trucks and drivers for an existing delivery.	High	Medium	Completed
10	Transport	Functional	System shall track delivery lifecycle statuses.	Medium	Low	Completed
11	Transport	Non-Functional	System shall restrict access to the TRANSPORTATION_MANAGER role.	High	High	Completed
12	Transport	Functional	System shall automatically create a Delivery if an auto-order lacks supplier transport.	High	High	New (A2)
13	Transport	Non-Functional	All transport and routing data must be persisted to an SQLite Database.	High	High	New (A2)

ID	Module	Functional/Non-Functional	Description	Priority	Risk	Status
1	Suppliers	Functional	System shall allow managing supplier profiles (Name, Address, Bank).	High	Low	Completed
2	Suppliers	Functional	System shall allow managing multiple contact personnel per supplier.	Medium	Low	Completed
3	Suppliers	Functional	System shall maintain supplier agreements including delivery days.	High	Medium	Completed
4	Suppliers	Functional	System shall map internal products to supplier catalog IDs.	High	Medium	Completed
5	Suppliers	Functional	System shall manage quantity-based discount brackets per product.	High	High	Completed
6	Suppliers	Functional	System shall track if the supplier provides their own transportation.	High	Low	Completed
7	Suppliers	Functional	System shall calculate the cheapest supplier for any given quantity.	High	High	Completed
8	Suppliers	Functional	System shall generate orders capturing final prices and applied discounts.	High	Medium	Completed
9	Suppliers	Functional	System shall maintain a historical log of all generated orders.	Medium	Low	Completed
10	Suppliers	Non-Functional	System shall enforce strict Israeli Bank Account (IBAN) formatting.	High	Low	Completed
11	Suppliers	Non-Functional	System shall restrict access to users with the SUPPLIER_MANAGER role.	High	High	Completed
12	Suppliers	Functional	System shall automatically generate periodic orders based on fixed delivery days.	High	High	New (A2)
13	Suppliers	Functional	System shall accept shortage requests and auto-generate the cheapest order.	High	High	New (A2)
14	Suppliers	Non-Functional	All supplier and order data must be persisted to an SQLite Database.	High	High	New (A2)
