

Operation instructions

In this part of the assignment we will walk you through the flow of our module.

Running: to run the program open the cmd and navigate to the folder of the .jar file, run `java -jar adss2025_v01`.

The First screen

The first screen you see consists of 4 options.

- Register Manager - starts a flow of creating a new employee with: id, name, bank account and your weekly rest day.
You select your rest day from a menu of the store's closed days. If not configured, you will be asked to select at least 1 day to close your store on. Afterwards, you are brought to the welcome screen and given a random generated password.
- Set Closed days - displays a menu for you to choose days to close the store on, until you press the 'back' option. you must choose at least one day but can not choose all of them
- Load Data - populates the system with data for you to mess around with.
 - Roles - The roles from the requirements doc are hard-coded but we also added the roles, Cleaner, Security and Intern.
 - Employees - we init 8 employees, all of them have the same details but id, password and roles
 - id: id 0, password: 0000, roles: [Cashier]
 - id: id 1, password: 1111, roles: [Shift Manager]
 - id: id 2, password: 2222, roles: [Cleaner]
 - id: id 3, password: 3333, roles: [Security]
 - id: id 4, password: 4444, roles: [Cashier]
 - id: id 5, password: 5555, roles: [Intern]
 - id: id 6, password: 6666, roles: [Storekeeper]
 - id: id 7, password: 7777, roles: [storekeeper]
 - Shifts and Weeks - We init 3 new weeks,
the week of 19/04/26, has one day shift on Sunday
the week of 12/04/26 has one evening shift on Monday
the week of 29/03/26 has no open shifts.
Both shifts have id 1 as a Cashier and id as Shift Manager
 - Requests - id 1 wants to swap places with id 4 on the Sunday morning shift defined earlier is 4 or a manager has not yet responded.
- Debug Mode - If selected, it will add a new option for every menu in the program to move time forward by a certain amount of hours.
This is helpful because we rely on the date in some of the requirements.

Login Screen

Login using id and password

Login as a manager you will see

- Logout
- Change password
- View shift history
- Manager Shifts - Lets you
 - open/close shifts, opening a shift requires adding a shift manager.
 - place employees to shift (only after the deadline had passed)
 - set the submission deadline (must be at least 1 day away)
 - handle the request of employees for replacing shifts
- Manager Employees - add / deactivate / view details / update employee
Note that updating an employee requires their agreement. so they must enter their password to confirm the action. That is to prevent the manager from changing their details without the employees knowing.
- Manager Roles - you can create a new role

Login as an employee you will see

- Logout
- Change Password
- View Schedule & Submit Availability - You are able to
 - Mark a shift as a shift you prefer not to work at.
 - Check who is placed to each shift
 - Submit you available shifts

Note: every time you enter the screen you can change it again, pressing 'back' does not save changes.
- Request Shift Replacement -
 - Lets you choose only from shift you are placed to, and then asks you to enter the id of an employee who is qualified for the job you were supposed to do, and is not also a part of the crew for the shift
 - Change the status of a request involving you, either accept or deny the request.
