

Client Requirements

The following list of requirements is composed of:

Requirements we derived straight from the client's story of the workers module.

Answers to questions asked by us and by other groups, we will denote them with an asterisk *.

We also gave our own responses to some questions which their implementation will not be affected heavily, denoted with an underscore _.

id	module	functional/ non functional	description	priority	risk	status
.1	workers	functional	The system MUST allow the HR manager to create, view, update, and deactivate worker profiles containing workers' details as specified (name, Id, bank account num, salary, working conditions, employment date, job scope, qualifications)	MH	Low	Implemented
*.2	workers	functional	the system MUST ensure only the HR manager is able to manage the workers' details	MH	Low	Implemented
*.3	workers	functional	The system MUST support the division of the workday into two fixed shifts: a morning shift (6am to 2pm) and an evening shift (2pm to 10pm)	MH	Low	Implemented
*.4	workers	functional	The system MUST allow workers to hand in their works preferences for each week	MH	High	Implemented
_.5	workers	functional	The system <u>CAN</u> allow the HR manager to define different roles (e.g., cashier, storekeeper)	<u>NTH</u>	Low	Implemented
*.6	workers	functional	The system MUST allow the HR manager to choose which jobs are required (and how many employees for each job) for a specific shift	MH	Low	Implemented

_.7	workers	functional	The system CAN allow the manager to set templates for shifts (for example, a delivery shift, will contain 5 storekeepers to help with the deliveries)	<u>NTH</u>	Low	not implemented yet
.8	workers	functional	The system MUST display the data about workers' availability in the placement screen	MH	Low	implemented
.9	workers	functional	The system MUST allow the manager to place workers into shifts	MH	Low	Implemented
*.10	workers	functional	The system MUST keep track of all shift history as specified (date, hours, workers, shift manager), while ensuring that only final and approved shift placements are recorded in the history.	MH	Low	implemented
.11	workers	functional	The system MUST ensure that each shift has a shift manager to swipe a cancellation card and manage the shift's workers	MH	Low	implemented
.12	workers	functional	The system MUST restrict the placement of a worker in a job for which they are not qualified for	MH	Low	implemented
*.13	workers	functional	The system MUST allow a worker to work a full or a part time job	MH	Low	implemented
*.14	workers	functional	the system MUST allow a worker to be paid monthly or hourly	MH	Low	implemented
*.15	workers	functional	the system MUST allow each worker to have their employment terms (date of employment, job type (full or part time), salary type (global or hourly), salary, amount of yearly rest days, extra in free words)	MH	High	Implemented
*.16	workers	functional	the system MUST keep a user for each employee	MH	Low	Implemented
*.17	workers	functional	The system MUST keep the	MH	Low	Implemented

			data for each employee even if they are fired			
*.18	workers	functional	The system CAN allow the manager to choose the deadline for all employees to submit what shifts then can take for the next week	<u>NTH</u>	Low	Implemented
*.19	workers	functional	The system MUST treat a worker who has not submitted their working constraints for the next week by the deadline as free for all shifts, not including double shifts	MH	Low	Implemented
*.20	workers	functional	The system CAN allow each worker to modify their next week working availability until the deadline	<u>NTH</u>	Low	Implemented
*.21	workers	functional	The system MUST allow each worker to specify whether they are willing to work double shifts as part of their working constraints	MH	Low	implemented
*.22	workers	functional	the system CAN allow workers in the day shift to stay for additional hours	<u>NTH</u>	Low	partly implemented (missing - The manager's practical option to enter it and the logical limitation to morning shifts only.)
*.23	workers	functional	The system MUST ensure that each employee in a shift works exactly one job for their shift	MH	Low	Implemented
*.24	workers	functional	The system CAN allow workers to cancel a shift after deadline only if someone is available for replacing them and given an approval of the HR manager	<u>NTH</u>	High	not implemented yet
*.25	workers	functional	The system MUST allow the manager to set the working time of the store	MH	Low	Implemented
*.26	workers	functional	The system CAN allow each employee a preferred rest day	<u>NTH</u>	Low	Implemented

			for each week at registration which will be permanent. If the store is open for 7 days a week, the employee will be able to choose any day. If the store is open for less than 7 days a week, then the system will let the employee choose one of the store's closed days.			
*.27	workers	functional	The system CAN allow each worker to view all placements of shifts of the current week	<u>NTH</u>	Low	partly implemented (The manager can but the employee not yet)
*.28	workers	functional	The system MUST allow the HR manager to propose a shift to a worker outside their submitted availability, which remains in a 'Pending' state until the worker explicitly approves it in the system.	MH	Low	Implemented
.29 —	workers	functional	The system CAN allow the HR manager to issue a report containing the names of all employees, how many hours they have worked for a selected time interval (from date to date) and their earned salary for this time interval	<u>NTH</u>	Low	not implemented
*.30	workers	non functional	the system SHOULDN'T impose a maximum or minimum amount of hours which a worker should work per week			
*.31	workers	functional	The system MUST allow a shift manager to take one additional job during their shift as a shift manager	MH	Low	not implemented
.32 —	workers	functional	The system CAN allow the HR manager to set a list of jobs which are required for all shifts	<u>NTH</u>	Low	not implemented
.33 —	workers	functional	The system CAN allow the first user to register to be set to the HR manager	<u>NTH</u>	Low	implemented (Hardcoded or pre-defined administrative credentials.)
.34	workers	functional	The system MUST ensure that	MH	Low	Implemented

			placements to shifts occur only after the deadline for submitting availability has passed			
.36	workers	functional	The system MUST ensure an employee's change of details is agreed by the employee, by using their password to confirm	MH	Low	Implemented
.37	workers	functional	the system MUST NOT allow the manager to set a deadline less than one day from the current time	MH	Low	Implemented

Questions for the Client

#	topic	issue	answer
.1	tracking workers list	Should the system issue a report of workers' details? If so, how frequently?	see requirement 29.

.2	managing workers list	How should managing the workers list be done? What actions should the system support? for example raising worker's salary, changing personal details and so on	the manager should be able to change all details. some will require the employee approval
.3	terms of employment	Do the workers' terms are in free words or selected from a closed selection of options, and what would be the relevant options?	ANSWER: We will allow some fields as closed and a field of extra to describe in free words. see requirement 15.
4.	access to workers' list	Who is responsible for managing the list, changing details and validating data integrity? such as correct bank account details	ANSWER: only the HR manager
.5	work preferences	when a worker submits their terms, how long do they apply for? What is the time interval in which workers need to submit their employment terms?	see requirements 4. and 18.
.6	worker's minimal hour required	Does a worker need to have a minimal amount of hours working per week? What should happen when a worker can not reach the minimum amount of hours in a certain week?	see requirement 31.
.7	worker priority	Will the system display the available workers according to some measure of priority, alphabetical, by first to register is	Client's answer on the forum: the workers should be displayed at random, no priority

		first on the list ect...	
.8	placement of workers and their terms and job	How should the system react when the manager places a worker who specified they can not work in that shift or can not work the specific job?	Client's answer: the employee is sent a request to work, no placement until they accept (not yet fully implemented)
.9	history of a shift	How far back should the system keep track of a shift's history? What details should be saved about each shift as the history of a shift?	Client's answer: all history and all details including who were working and what jobs. see requirement 10.
.10	manage the workers in a shift	What actions can a shift manager do? for example, hand out orders for each worker?	Answer: swipe a cancellation card, take <u>one</u> additional job during their shift as a manager. see requirement 31.
.11	required jobs	Does each shift have jobs which are required and the manager can not choose not to have those?	see requirement 32.
.12	registering the manager	the system only accepts new workers if the manager adds them, but who adds the manager?	see requirement 33.
