

validateAndCreateDelivery

SYSTEM CONTRACT

Operation

```
validateAndCreateDelivery(date: Date,  
shiftType: ShiftType, truckId: String,  
destStoreId: String, cargo:  
List<CargoItemDL>)
```

Cross References

Use Case h (Dispatch Transport)

Pre-conditions

- The system is running and the transport manager has initiated a delivery allocation.
- The truck associated with `truckId` exists in the database and is marked as active.

Post-conditions

- A new Delivery instance was created assigned to the scheduled driver holding a compatible license for the requested `truckId`.
- The Delivery instance was associated with the specified `destStoreId` and `cargo` list.
- The new Delivery instance was saved persistently to the database via TransportDAO.
