

assignDriverToShift

SYSTEM CONTRACT

OPERATION

```
assignDriverToShift (driverId: String, date: Date, shiftType: ShiftType,  
storeId: String)
```

CROSS REFERENCES

Use Case g (Scheduling employees to shifts)

PRE-CONDITIONS

The employee **driverId** exists, has the role of a Driver, and has submitted availability for the requested shift.

POST-CONDITIONS

- The Shift instance was updated to include the driver **driverId**.
- The database was updated with the new shift assignment via ShiftPool or DataAccess layer.
- The assigned driver is now available for validation by the Transportation module during delivery planning.
