

createEmployee

SYSTEM CONTRACT

Operation

```
createEmployee(id: String, name: String,  
bankAccount: String, salary: double,  
roleId: String, startDate: Date)
```

Cross References

Use Case a (Onboard new employee)

Pre-conditions

- An employee with the given **id** does not currently exist in the database.
- The role identified by **roleId** is an existing and valid role in the system.

Post-conditions

- A new **Employee** instance *was created (instance creation)*.
- The Employee instance attributes (name, bank account, salary, start date) were initialized.
- The Employee instance *was associated* with the **Role** instance identified by **roleId** (*association formed*).
- The new Employee instance *was saved* persistently to the database via EmployeePool/DataAccess (*state modification*).
