

updateEmployeeDetails

SYSTEM CONTRACT

Operation

updateEmployeeDetails(id: String, newName: String, newBankAccount: String, newSalary: double, newRoleId: String)

Cross References

Use Case b (Update employee details)

- Pre-conditions
- An employee matching the provided `id` currently exists in the database.
 - The role identified by `newRoleId` is valid.

- Post-conditions
- The **Employee** instance associated with the provided `id` *was modified*.
 - The Employee's attributes (name, bank account, salary, and role association) were updated to match the new inputs (*state modification*).
 - The updated Employee instance *was saved* persistently to the database via EmployeePool/DataAccess.
