

Use Case d - Add new supplier

USE CASE

Textual Description	The Supplier Manager adds a new supplier to the system. This includes defining the supplier's basic details, associating a contact person, and saving the record to the system's database to enable future order generation.
List of Actors	Supplier Manager
Pre-conditions	• The Supplier Manager is authenticated and has the required permissions. • The requested supplier's Business Number (BN) or ID does not currently exist in the database.
Post-conditions	A new Supplier instance, along with its associated Contact Person instance, is created and persistently saved to the database.

Main Success Scenario

1. The Supplier Manager selects 'Add New Supplier' in the system interface.
2. The Supplier Manager inputs the supplier details (Business Number, name, bank account, contact person name, and contact phone).
3. The system checks the database to validate that the provided Business Number does not already exist.
4. The system validates the input data formatting (e.g., correct phone number length, valid bank account format).
5. The system creates a new ContactPerson record with the provided contact details.
6. The system creates the new Supplier record and associates it with the Contact Person.

7. The system persistently saves the new Supplier to the database.
8. The system displays a success confirmation message.

Alternatives / Extensions

3a. Supplier Business Number already exists:

1. The system identifies that the Business Number is already registered to another supplier.
2. The system displays an error message blocking the creation.
3. The use case terminates.

4a. Invalid input data formatting:

1. The system detects invalid formatting (e.g., missing digits in phone number).
2. The system highlights the erroneous fields and displays a validation error message.
3. The Supplier Manager corrects the data and re-submits. Return to step 3.
