

Contract: processPeriodicOrders

Operation: processPeriodicOrders(today: Date)

Cross References: Use Case e (Process Periodic Orders)

Pre-conditions:

- The system is initialized and running.
- Suppliers with fixed delivery days are defined in the database.
- Active agreements exist linking these suppliers to specific products and quantities.

Post-conditions:

- A new **Order** instance *was created* for every supplier whose delivery day matches today + 1 (*instance creation*) .
- An **OrderItem** instance *was created* for each product defined in the respective supplier's agreement (*instance creation*) .
- Each **OrderItem** *was associated* with its respective new **Order** (*association formed*) .
- The new **Order** instances *were saved* persistently to the database (*state modification*) .
