

assignDriverToShift

SYSTEM CONTRACT

Operation

`assignDriverToShift(driverId: String,
date: Date, shiftType: ShiftType, storeId:
String)`

Cross References

Use Case g (Scheduling employees to shifts)

Pre-conditions

- The employee `driverId` exists, has the role of a Driver, and has submitted availability for the requested shift.

Post-conditions

- The `Shift` instance was updated to include the driver `driverId` .
- The database was updated with the new shift assignment via `ShiftPool` or DataAccess layer.
- If deliveries are scheduled for this shift, the assigned driver is guaranteed to have a license meeting or exceeding the highest required license for the assigned trucks.
