

ID	Module	Functional / Non-Functional	Description	Priority	Risk	Status
1	Suppliers	Functional	The system MUST allow users to add, update, view, and remove suppliers.	High	Low	Completed
2	Suppliers	Functional	The system MUST store for each supplier their registration number, bank account, payment terms, and contact details including names and phone numbers.	High	Low	Completed
3	Suppliers	Functional	The system MUST maintain a formal supplier agreement listing items with their catalog number and agreed price.	High	High	Completed
4	Suppliers	Functional	The system MUST allow storing fixed delivery days per supplier, indicating the days of the week on which the supplier delivers.	Medium	Low	Completed
5	Suppliers	Functional	The system MUST allow creating orders from supplier agreements, applying the agreed price defined in the agreement automatically.	High	Medium	Completed
6	Suppliers	Functional	The system MUST save all orders as history and allow users to review past orders.	High	Low	Completed
7	Suppliers	Functional	The system MUST ensure that changes to a supplier agreement apply only to future orders and do not retroactively affect existing or past orders.	High	High	Completed
8	Suppliers	Functional	The system MUST allow placing urgent orders outside of a supplier's fixed delivery days.	Medium	Medium	Completed
9	Suppliers	Functional	The system MUST allow the same internal inventory item to be supplied by multiple different suppliers.	High	Medium	Completed
10	Suppliers	Functional	The system MUST allow defining supplier-specific quantity-based discount rules per agreement item.	Medium	Medium	Completed
11	Suppliers	Non-Functional	Dashboard UI MUST automatically react and refresh upon any changes.	Medium	Low	Completed
12	Suppliers	Non-Functional	The system MUST enforce strict Israeli Bank Account (IBAN) formatting.	High	Low	Completed
13	Suppliers	Non-Functional	The system MUST restrict access to users with the SUPPLIER_MANAGER role.	High	Low	Completed
14	Suppliers	Non-Functional	All supplier and order data MUST be persisted to an SQLite Database.	High	High	Completed

ID	Module	Functional / Non-Functional	Description	Priority	Risk	Status
1	Inventory	Functional	The system MUST allow users to add, update, view, and delete products from the catalog.	High	Low	Completed
2	Inventory	Functional	The system MUST store for each product its ID, name, manufacturer, cost price, selling price, category, and a unique SKU/code.	High	Low	Completed
3	Inventory	Functional	The system MUST track warehouse quantity and shelf quantity separately for each product at each location.	High	Medium	Completed
4	Inventory	Functional	The system MUST define a minimum stock threshold per product and automatically generate a low-stock alert when stock drops to or below it.	High	High	Completed
5	Inventory	Functional	The system MUST support a category hierarchy with at least two levels (category and sub-category).	Medium	Medium	Completed
6	Inventory	Functional	The system MUST allow reporting of defective and expired items and generation of a waste and defects report.	Medium	Medium	Completed
7	Inventory	Functional	The system MUST allow defining discounts or promotions on individual products or entire categories, with a specified date range.	Medium	Medium	Completed
8	Inventory	Functional	The system MUST allow generating inventory reports filtered by category.	Medium	Low	Completed
9	Inventory	Functional	The system MUST generate a shortage and order report listing items that need to be reordered.	Medium	Low	Completed
10	Inventory	Functional	The system MUST track shelf location as an addressable concept with aisle and position, not merely a warehouse or shelf boolean flag.	High	Medium	Completed
11	Inventory	Non-Functional	The system MUST restrict access to users with the INVENTORY_MANAGER role.	High	Low	Completed
12	Inventory	Non-Functional	Dashboard UI MUST automatically react and refresh upon any changes.	Medium	Low	Completed
13	Inventory	Non-Functional	All inventory data MUST be persisted to an SQLite Database.	High	High	Completed

ID	Module	Functional / Non-Functional	Description	Priority	Risk	Status
1	Transportation	Functional	The system MUST allow users to add, update, view, and remove trucks, including weight capacity and refrigeration capability.	High	Low	Completed
2	Transportation	Functional	The system MUST allow users to add, update, view, and remove drivers, including license type and license expiry date.	High	Low	Completed
3	Transportation	Functional	The system MUST allow users to create, update, view, and cancel deliveries.	High	Low	Completed
4	Transportation	Functional	The system MUST define a delivery route with an origin site and one or more ordered destination sites.	High	Medium	Completed
5	Transportation	Functional	The system MUST assign a truck and a driver to each delivery and persist the assignment.	High	Medium	Completed
6	Transportation	Functional	The system MUST support a Transportation Manager role responsible for authorizing and overseeing deliveries.	Medium	Medium	Completed
7	Transportation	Functional	The system MUST track cargo items on a delivery including their weight and the destination site for each item.	High	Medium	Completed
8	Transportation	Functional	The system MUST validate that the total cargo weight of a delivery does not exceed the assigned truck's carrying capacity and reject overweight loads.	High	High	Completed
9	Transportation	Functional	The system MUST allow deliveries to be replanned or modified after their initial creation.	Medium	Medium	Completed
10	Transportation	Functional	The system MUST store site information including address and contact details for each origin and destination.	Medium	Low	Completed
11	Transportation	Non-Functional	Dashboard UI MUST automatically react and refresh upon any changes.	Medium	Low	Completed
12	Transportation	Non-Functional	System MUST restrict access to the TRANSPORTATION_MANAGER role.	High	Low	Completed
13	Transportation	Non-Functional	All transport and routing data MUST be persisted to an SQLite Database.	High	High	Completed

id	module	functional/ non functional	description	priority	risk
1.	Employees	Functional	The system MUST allow the following operations on employees: create, view, update, and deactivate employees. And MUST ensure that they are performed only by the HR manager, or by a branch manager on employees who belong to the branch that he is the manager of.	MH	Low
.2	Employees	Functional	The system MUST save the following details for each employee: name, Id, bank account num, salary amount and type (global or by the hour), working conditions, employment date, job scope (partial or full time), qualifications, yearly rest days, fixed day of.	MH	Low
.3	Employees	Functional	The system MUST ensure that each employee belongs exactly to one branch of the store	MH	Low
.4	Employees	Functional	The system MUST allow each employee to hold at least 1 role for jobs which they are qualified for	MH	Low
.5	Employees	Functional	The system MUST manage shifts. Each shift has a date, type (morning 6am to 2pm, evening 2pm to 10pm), and staffing for the roles required. And shifts can only be managed by the HR manager or the branch manager on shifts which belong to said branch	MH	Low
.6	Employees	Functional	The system MUST ensure that each shift has a shift manager	MH	Low
.7	Employees	Functional	The system MUST allow each employee to hand in their availability for the next week (and if they are willing to work double shifts) before the deadline. Unless if this is the first week of their branch being open, in that case they are assumed to be able to work for that week.	MH	Low

			Employee who did not submit by the deadline is assumed to be able to work all shifts for the next week.		
.8	Employees	Functional	The system <u>CAN</u> allow the HR manager to define different roles (e.g., cashier, storekeeper)	NTH	Low
.9	Employees	Functional	The system MUST allow to place employees to shifts which the employees are available to work at and roles which they can take.	MH	Low
.10	Employees	Functional	The system MUST keep track of all shift history as specified (date, hours, workers, shift manager), while ensuring that only final and approved shift placements are recorded in the history.	MH	Low
.11	Employees	Functional	The system MUST keep the data for each employee even if they are fired	MH	Low
.12	Employees	Functional	The system <u>CAN</u> allow the manager to choose the deadline for all employees to submit what shifts then can take for the next week	NTH	Low
.13	Employees	Functional	the system <u>CAN</u> allow workers in the day shift to stay for additional hours, but MUST not allow workers in the night shift to do the same.	NTH	Low
.14	Employees	Functional	The system MUST ensure that each employee in a shift works exactly one job for their shift	MH	Low
.15	Employees	Functional	The system <u>CAN</u> allow workers to cancel a shift after deadline only if someone is available for replacing them and given an approval of the HR manager or relevant branch manager	NTH	Low
.16	Employees	Functional	The system MUST allow the manager to set the working days of the store	MH	Low

17	Employees	Functional	The system MUST allow the HR manager to propose a shift to a worker outside their submitted availability, which remains in a 'Pending' state until the worker explicitly approves it in the system.	MH	Low
.18	Employees	Functional	The system MUST allow a shift manager to take one additional job during their shift as a shift manager	MH	Low
19	Employees	Functional	The system MUST ensure that placements to shifts occur only after the deadline for submitting availability has passed, but if this is the first week of a branch, the manager MUST be able to place employees to the first week whenever.	MH	Low
20	Employees	Functional	The system MUST ensure an employee's change of details is agreed by the employee, by using their password to confirm	MH	Low
21	Employees	Functional	the system MUST NOT allow the manager to set a deadline less than one day from the current time	MH	Low

Integration

Id	Modules	Functional/ non functional	Description	Priority	Risk
1	Employees & Transportation	Functional	The system MUST include a 'Driver' role and allow driver placement to shifts like all roles.	MH	Low
2	Employees & Transportation	Functional	The system MUST ensure that every transport has a driver, according to the transport's details which are (time, destination, arrival)	MH	Low
3	Employees & Transportation	Functional	The system MUST ensure that every driver has an appropriate license to operate the truck which they are placed to	MH	Low
4	Employees & Transportation	Functional	The system MUST display the driver as a worker at the shift in which the delivery arrives	MH	Low
5	Employees & Transportation	Functional	The system MUST ensure that every shift with a delivery has at least one storekeeper placed in it	MH	Low
6	Suppliers & Inventory	Functional	The system MUST automatically generate a shortage order the exact moment an inventory item's total quantity drops below its defined minimum threshold. Upon detecting a shortage, the system must dynamically scan all active supplier agreements for the missing product, calculate the final price (incorporating specific discount brackets based on the missing amount), and immediately dispatch the order to the supplier offering the lowest total cost.	MH	Medium
7	Suppliers & Inventory	Functional	The system MUST execute a daily automated background process to fulfill periodic supplier agreements. The system must evaluate all active agreements that are not "On-Demand." If a supplier's fixed	MH	Medium

			delivery schedule includes the following day (e.g., checking on Monday for a Tuesday delivery), the system must automatically generate and place an order for the predefined products and base quantities specified in that agreement.
