

b. Update employee details

USE CASE

Textual Description	The HR Manager updates the personal or professional details of an existing employee in the system (e.g., updating salary, changing bank account information, or assigning a new role).
List of Actors	HR Manager
Pre-conditions	• The HR Manager is authenticated and has the required permissions. • The targeted employee exists in the system database.
Post-conditions	The employee's record is successfully modified with the new details and persistently saved in the database.

Main Success Scenario

1. The HR_Manager selects 'Update Employee' and inputs the targeted Employee ID.
2. The system retrieves and displays the current details of the employee.
3. The HR_Manager modifies the desired fields (e.g., salary, bank account, role).
4. The HR_Manager submits the updated information.
5. The system validates the newly provided data format.
6. The system updates the Employee record in the memory pool.
7. The system persistently saves the modified record to the database.
8. The system displays a success confirmation message.

Alternatives / Extensions

2a. Employee not found:

1. The system determines that the provided Employee ID does not exist in the database.
2. The system displays an error message to the HR_Manager.
3. The use case terminates.

5a. Invalid updated data:

1. The system detects invalid input (e.g., negative salary).
2. The system highlights the erroneous fields and displays a validation error.
3. The HR_Manager corrects the data and re-submits. Return to step 5.
