

updateEmployee

SYSTEM CONTRACT

Operation	<code>updateEmployee(employee: EmployeeSL, password: String): boolean</code>
Cross References	Use Case (Update employee details)
Pre-conditions	• An <code>EmployeeSL</code> data transfer object containing the proposed updates and a valid <code>password</code> string are provided.
Post-conditions	• The system verified if an employee matching <code>employee.getId()</code> currently exists in the database via <code>EmployeeDAO.exists(id)</code>. • If the employee exists (<code>exists == true</code>): ◦ The <code>EmployeeSL</code> instance <i>was converted</i> to an Employee entity using the provided password. ◦ The updated Employee entity <i>was saved</i> persistently to the database via <code>EmployeeDAO.addUpdateEmployee(entity)</code> (<i>state modification</i>). ◦ The operation returned <code>true</code>. • If the employee does not exist (<code>exists == false</code>): ◦ No state modification occurred. ◦ The operation returned <code>false</code>.
